

Food and Beverage Sales Dashboard - Case Study

Project Overview:

This project presents an interactive **Food and Beverage Sales Dashboard** designed to monitor sales performance, revenue growth, and product trends across different sales channels.

The dashboard provides a clear view of:

- Total Revenue
- Units Sold
- Average Order Value (AOV)
- Revenue Trends Over Time
- Performance by Product Category
- Revenue Contribution by Sales Channel
- Top-Selling Products

The goal of this dashboard is to help business teams quickly identify:

- Which products generate the most revenue
- Which sales channels perform best
- How sales trends change over time
- Where growth opportunities exist

The dashboard also includes dynamic filters for:

- Year
- Manager
- Salesperson

This allows stakeholders to analyze performance from different business perspectives and make faster data-driven decisions.

Business Questions:

Overall Business Performance

- How much total revenue does the business generate?
- How many total units does the business sell?
- What is the average order value (AOV) across all sales?

Revenue Trend Analysis

- How does revenue change over time?
- Which months show the highest sales performance?
- Are sales growing consistently throughout the year?

Product Performance

- Which products generate the highest revenue?
- Which products sell the most units?
- Which product categories contribute the most to overall sales?

Sales Channel Performance

- Which sales channel generates the highest revenue?
- How do Retail, Distributor, and Online channels compare in performance?
- Which channel contributes the lowest sales?

Team & Operational Insights

- Which managers and salespersons drive the most revenue?
- Which low-performing products need business attention?
- How can the business improve sales performance and profitability?

What are your Key Insights?

What are your Business Recommendations to increase overall revenue?
